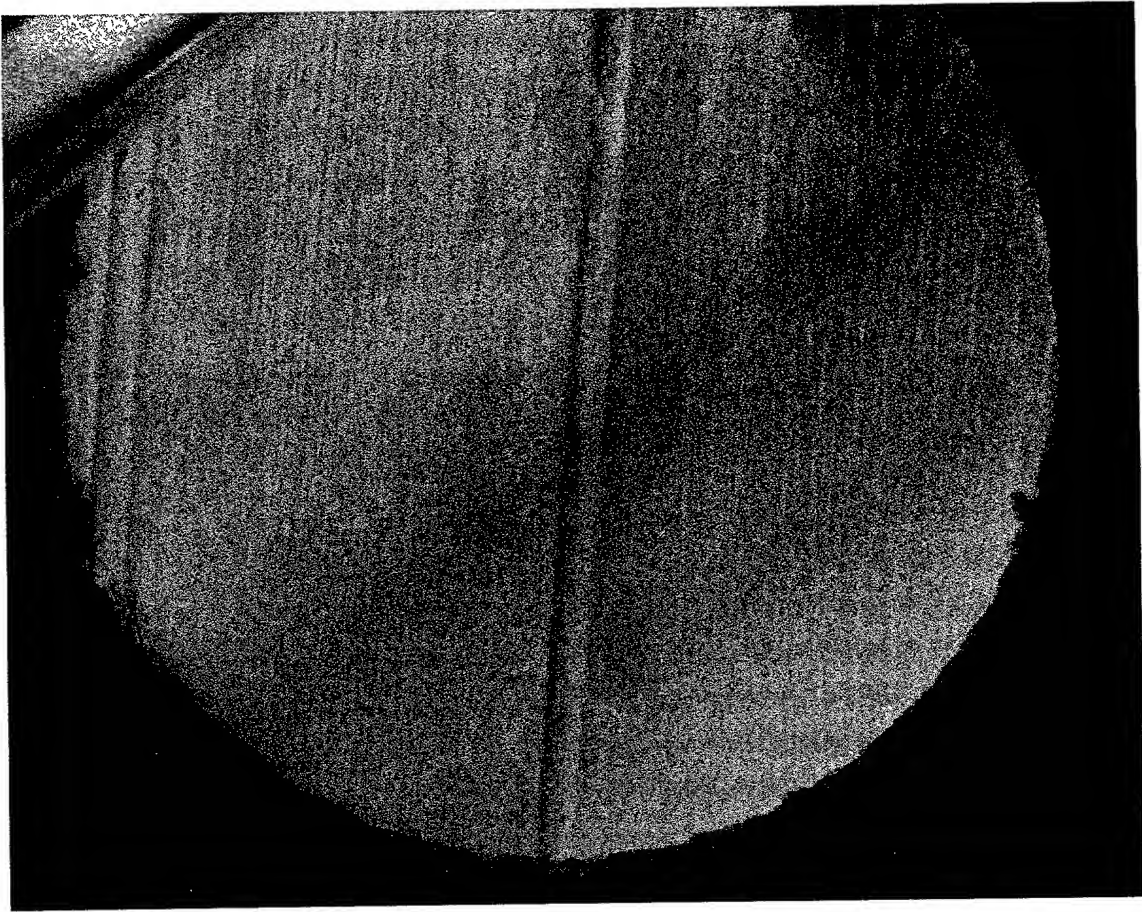

Figure 1. A section of plasterboard was treated with a Mildew Shield. The presence of coating is visible under a black light.

A high-contrast, black and white photograph of a textured surface, possibly a book cover or endpaper. The texture is grainy and appears to be made of a woven material like cloth or paper. The lighting is dramatic, with deep shadows and bright highlights, emphasizing the tactile quality of the material. The surface shows a grid-like pattern of raised and recessed areas, creating a sense of depth and rhythm. The overall effect is abstract and tactile, focusing on the physical properties of the material.
